

H.U.G. SUMMER SUMMIT 2026 - JUNE 26, 2026

# AI, Agentic AI, and OpenClaw for Real Work

A practical frame for educators, students, nonprofit leaders, and community partners.

Arnold Castro

Texas A&M Professor

Brad Groux

Digital Meld

OpenClaw Maintainer

## CO-PRESENTERS

# Education, workforce readiness, and practical agent workflows.

**Arnold Castro**

Professor of Practice in Artificial Intelligence, Texas A&M University Mays Business School. Workshop lead for the hands-on AI block.

## THE CORE IDEA

# AI gets useful when it has context, boundaries, and review.

### Context

What are we trying to do? What sources matter? What does good look like?

### Boundaries

What data is allowed? What tools are allowed? What must stay human-owned?

### Review

What evidence is checked before anyone trusts, shares, or acts on the output?

## PLAIN ENGLISH

# AI is software that uses data to make predictions or generate useful output.

It can classify, summarize, draft, translate, plan, recognize patterns, and help people work through messy information.

### Machine learning

Learns patterns from examples instead of only following hand-coded rules.

### Generative AI

Creates text, images, audio, code, plans, summaries, and drafts.

### The catch

Fluent output is not the same thing as verified truth.

## WHAT CHANGED

# The interface became language.

That is why AI suddenly matters to educators, students, nonprofits, and local organizations. It can work with the documents, notes, emails, policies, and questions people already have.

### Access

You do not need to build a model to use one.

### Speed

Drafts and summaries happen in minutes instead of days.

### Judgment

The human job moves toward context, review, and decisions.

## AGENTIC AI

# A chatbot answers. An agent works a process.

Agentic AI combines a goal, context, memory, tools, steps, and review so the system can do multi-step work and report back.

### Goal

What outcome should this run produce?

### Context and memory

What should it know before starting?

### Tools

What files, browser, APIs, or commands can it use?

### Review

What checks happen before the result is used?

## WHY THIS MATTERS HERE

# AI literacy is workflow literacy.

### Education

Summarize public research, prepare tutoring materials, adapt drafts, and support accessibility.

### Workforce

Learn how to give context, check sources, protect data, and verify outputs.

### Nonprofits

Reduce administrative friction without handing over sensitive decisions.

The durable skill is not "write prompts." It is designing safe, repeatable work.

## OPENCLAW

# A local-first control plane for agent workflows.

OpenClaw connects model providers, memory, instructions, tools, channels, sessions, and automations so agent work is visible and repeatable.

### Process beats model choice

The model matters. The harness matters. Your process matters more: source material, boundaries, review, and the decision about what should happen next.

### Process

The repeatable way work moves from source material to reviewed output.

### Harness

The wrapper around the agent: memory, instructions, tools, channels, checks, and approvals.

### Outcome

A draft, brief, task, summary, or action that a human can inspect before use.

## MENTAL MODEL

# OpenClaw gives the agent a place to work.

### Provider

OpenAI, Anthropic, Microsoft Foundry, or another supported model source.

### Gateway

The local switchboard for sessions, tools, routing, and events.

### Memory

Durable context the agent can reuse across work.

### AGENTS.md

Plain-text instructions, boundaries, and output expectations.

### Tools

Files, browser, shell, APIs, connectors, and local workspace access.

### Loops

Recurring checks, research passes, drafts, reviews, and follow-ups.

## MEMORY

# Memory keeps the useful context from disappearing between prompts.

Use memory for stable facts: purpose, audience, data boundary, preferred output, terms, and review expectations.

### # H.U.G. Reading Research Memory

#### ## Purpose

Help educators and nonprofit leaders turn public reading-support sources into practical briefs.

#### ## Data Boundary

Use public or sanitized material only.  
Never use private student, donor, staff, credential, or confidential data.

#### ## Preferred Output

- summary
- evidence table
- practical ideas
- risks and limits
- human review checklist

## AGENTS

# Agents need a role, allowed tools, boundaries, and a review habit.

AGENTS.md is the contract: what job the agent has, what it can touch, what it must avoid, and how it should report back.

```
# AGENTS.md
```

```
You are a reading-support research agent.
```

```
Rules:
```

- use public or sanitized sources only
- separate facts from recommendations
- flag assumptions and missing evidence
- treat output as a draft
- require human review before use

# Agents should meet people where work already happens.

Channels are entry points into the same bounded workflow. They are useful only when the process, data boundary, and approval rule are clear.

## Discord

Community Q&A, workshop follow-up, lightweight support, and public-safe prompts.

## Microsoft Teams

Business collaboration, internal triage, meeting prep, and reviewed drafts.

## WhatsApp

Mobile-first coordination where simple prompts and review gates matter.

## Telegram

Fast group workflows, notifications, and lightweight bot interactions.

## Signal

Privacy-aware coordination that still needs clear source and approval boundaries.

## Rule

Channels do not make risky actions safe. Humans approve external sends and sensitive work.

## THE HARNESS

# The agent is only one part of the system.

### Sources

Public documents, sanitized notes, examples, policies, and approved links.

### Memory

Purpose, data boundary, audience, terms, and preferred outputs.

### Instructions

What role the agent plays, what it can do, and what it must avoid.

### Verification

Review prompts, evidence checks, source checks, and human approval.

This is how you move from clever prompts to repeatable work.

## HOW TO GET MORE FROM AGENTS

# Build loops, not one-off asks.

### Plan loop

Ask clarifying questions, define the output, and record decisions.

### Work loop

Let the agent draft, organize, compare, summarize, or build inside a workspace.

### Review loop

Run skeptical review before trusting, sharing, or acting on the result.

The loop matters more than the first answer.

## AUTOMATIONS

# Use recurring loops for reminders, monitoring, and review packets.

Good automations have a trigger, bounded inputs, visible output, a stop condition, and human review.

### Trigger

Daily, weekly, after file changes, before a meeting, or after a deadline.

### Output

Brief, checklist, issue draft, lesson prep packet, or research summary.

### Review

Humans approve before sending, publishing, or changing records.

## SIMPLE INSTALL PATH

# Install, onboard, choose a provider, verify the dashboard.

Do not turn the first workshop into a tool marathon.  
Get to one working response fast.

```
# Mac
curl -fsSL https://openclaw.ai/install.sh | bash
openclaw onboard --install-daemon
openclaw doctor
openclaw gateway status
openclaw dashboard

# Windows PowerShell
iwr -useb https://openclaw.ai/install.ps1 | iex
openclaw onboard --install-daemon
```

## WORKSHOP IDEA

# Create a reading-support research agent.

### Memory

Purpose, audience, data boundary, and preferred output.

### Sources

Public reading research, sanitized notes, approved links, and workshop examples.

### Output

A short brief, evidence table, activity ideas, risks, and review checklist.

### Boundary

No private student data, donor records, staff records, credentials, or confidential notes.

## SAFE FIRST WINS

# Start with draft-only work that helps people think.

### Research brief

Summarize public sources and list evidence limits.

### Volunteer guide

Turn approved program notes into a checklist or orientation draft.

### Lesson support

Draft reading activities for human review and adaptation.

Avoid live sends, private records, production actions, and sensitive decisions until the workflow is proven.

## CALL TO ACTION

# Join the SSTB Discord for questions and help.

Bring one safe workflow idea. We can help turn it into memory, an AGENTS.md file, a prompt pack, and a review loop.

Start Small, Think Big

OpenClaw follow-up

Agent harness help

CLOSE

# AI should make people more capable, not less responsible.

Use OpenClaw to give agents context, memory, tools, visible loops, and review. Start small, keep the data safe, and make the human decision point explicit.

Context first

Boundaries always

Review before action
